

SwiftMesh - Topic Proposal

For my CSCE 242 topic selection, I have decided to work with a client to create SwiftMesh Solutions; a professional technology and talent solutions website combining the strengths of Swift Solutions Inc. and CypherMesh. The website will serve to represent different ways of finding qualified technology professionals while also gaining information about digital data, artificial intelligence, and cybersecurity related solutions. The purpose of this project is to give potential clients a clear understanding of the company's services, teams, industries and a real world approach on solving modern digital business problems, the site will also help individuals that are in pursuit of jobs; give them an opportunity to learn what it is like to work with the company. I plan to make the website polished with animations, images, bold texts that stand out and informative service cards in hopes of creating an appealing informational environment.

For the structure of the webpage, I plan on creating 6 different pages:

1. Home/Title
2. Services
3. About Us
4. Blog/Insights
5. Careers
6. Contact Us
